DECATHLON RETAIL PERFORMANCE

Executive Report — Sales & Profitability Overview

Purpose: Turn the dashboard and its business requirements into a concise management-style report that explains the business questions, the visible results, the checks still required, and how stakeholders could use the analysis.

> **Important Data Note:** The values below are from the supplied project dashboard screenshot. They should be treated as portfolio-dataset outputs—not as verified Decathlon company results. The requirements document also flags filter-state and calculation-scope checks that should be completed before presenting all figures as final.

1. EXECUTIVE SNAPSHOT

NET SALES YTD	GROSS PROFIT YTD	GROSS MARGIN YTD	UNITS SOLD YTD	ORDERS YTD	AVG ORDER VALUE
₹55.26M	₹21.72M	39.3%	47.77K	24.08K	₹2.29K

The dashboard is designed to give retail leaders a single view of sales, gross profitability, order activity, and product/region performance. The screenshot shows positive year-over-year comparisons across the displayed KPIs; however, those comparisons should be described as provisional until the reporting period, slicer state, and measures pass the acceptance checks in the business requirements.

2. WHAT THE DASHBOARD IS BUILT TO ANSWER

Business Question	How the Report Helps
Are sales and gross profit improving?	Compare current year-to-date (YTD) with the equivalent prior-year period (PYTD).
Is profitability improving?	Track gross margin and its change in percentage points—not relative percent growth.
Which sports drive sales?	Rank sports using the same YTD sales measure and filter context as the main KPI.
Which product types combine scale and margin?	Use a scatter plot to compare YTD sales with gross margin; inspect orders and profit in tooltips.
Where does sales contribution come from?	Compare regional sales and contribution percentages; reconcile the total to the sales KPI.
Which brands are growing faster or slower?	Rank brand-level YTD sales growth and clearly label the benchmark line.
How do segments affect results?	Use State, Sport, Colour, Payment Method, and Promotion slicers to investigate segments.

DECATHLON RETAIL PERFORMANCE

Dashboard Walkthrough & Preliminary Observations

3. DASHBOARD WALKTHROUGH

KPI Row: Shows six headline measures: Net Sales, Gross Profit, Gross Margin, Units Sold, Total Orders, and AOV. Each KPI should include YTD, PYTD, and the year-over-year change.

Monthly Net Sales: Compares individual monthly sales for the current and prior year. January–August should use full months; September should compare only 1–15 September for the reference cutoff.

Net Sales by Sport: Ranks sports by YTD net sales. It must use the same YTD scope and slicer context as the KPI, otherwise category totals can appear inconsistent.

Product Type Performance: Compares product-type sales and gross margin. The bubble size is specified as Total Orders in the requirements; confirm the actual field in the visual before claiming it represents orders.

Net Sales YTD by Region: Shows each region's sales and share of total. Region values should reconcile to the sales KPI, and shares should total approximately 100% after rounding.

Sales Growth by Brand Label: Ranks brands by YTD sales growth. Any reference line should be named and defined explicitly—for example, Overall Sales Growth or Average Brand Growth.

4. PRELIMINARY OBSERVATIONS FROM THE SCREENSHOT

These observations describe what is visible in the supplied screenshot. They are not causal conclusions, and some may change after the report's filters and measures are validated.

Visible Item	Screenshot Observation	Business Interpretation / Caution
Net Sales YTD	₹55.26M	Headline sales scale for the current YTD period shown; confirm the report is in the all-data baseline state.
Gross Profit YTD	₹21.72M	Profitability amount shown; reconcile against Net Sales minus Net COGS according to dataset definition.
Gross Margin YTD	39.3%	Headline margin; verify using aggregated gross profit divided by aggregated net sales.
Sales Trend	Sales generally appear higher in current year than PY line for Jan–Sep.	September is a partial month through 15 September; label it clearly and compare like-for-like dates.
Sport Ranking	Hiking appears as largest visible sport at about ₹16.1M.	Visible sport bars can exceed sales KPI. Confirm chart uses YTD sales and identical filters before interpreting.
Brand Growth	Visible brands show positive growth labels (~15%–28%).	Only visible brands are shown. Confirm full ranking, negative values, prior-year denominators, and benchmark.
Filters	State, Sport, Colour, Payment Method, Promotion slicers present.	Requirements note reference state may have Promotion = None, which is not the same as All promotions.

DECATHLON RETAIL PERFORMANCE

Validation Checklist & Next Actions

5. PRIORITY VALIDATION CHECKLIST BEFORE PUBLISHING

- **Reporting Cutoff:** Confirm latest valid purchase date is 15 September 2026. Keep cutoff fixed when slicers change.
- **Matched Periods:** YTD = 1 Jan–15 Sep 2026; PYTD = 1 Jan–15 Sep 2025. September monthly values compare days 1–15 only.
- **Filter Baseline:** Set all five slicers to All for default view. Ensure reset button restores Promotion = All baseline.
- **Sport & Region Reconciliation:** Each category breakdown must reconcile to the sales KPI under identical filters.
- **Gross Profit & Margin:** Reconcile profit to Net Sales minus Net COGS. Margin must be total profit divided by total sales.
- **Units Sold:** Document if Units Sold means gross Quantity or Quantity minus Returned_Qty. Apply consistently.
- **Orders & AOV:** Use distinct valid Order_IDs, exclude blanks, and calculate AOV as net sales divided by distinct orders.
- **Brand Growth:** Handle zero/missing prior sales as blank/NA. Label benchmark as Average Brand Growth or Overall Growth.
- **Interactions & Formatting:** Test all slicer combinations. Standardize colors, arrows, clear units, and unclipped titles.

6. RECOMMENDED BUSINESS NARRATIVE

> "This dashboard brings together retail sales, gross profitability, order activity, and product/region performance in one interactive Power BI report. It allows stakeholders to compare YTD results with the equivalent prior-year period, review monthly movement, and investigate sports, product types, regions, and brands through slicers. The current screenshot indicates positive displayed year-over-year comparisons, but I would validate the default filter state and reconcile category visuals to the KPI totals before sharing final conclusions."

7. SUGGESTED NEXT ACTIONS FOR A REAL BUSINESS REVIEW

Priority	Action	Why It Matters
1	Validate calculations and default filter state.	Ensures headline numbers and comparisons are trustworthy.
2	Investigate sport/region totals not reconciling to KPI.	Prevents misleading conclusions from different date scopes.
3	Review low/negative-growth brands after full ranking check.	Creates a focused shortlist for merchandising investigation.
4	Investigate margin changes alongside sales & promo mix.	Helps generate hypotheses; additional evidence needed for causes.
5	Review monthly trends with partial September clearly identified.	Avoids comparing a half-month with a full month.

8. PROJECT SCOPE AND LIMITATIONS

Included: Sales/gross profitability, matched-period comparisons, sport/product/brand/region segmentation, 5 slicers, report interactions.
Excluded: Sales targets, forecasting, inventory availability, customer retention, market share, or proof of promotion effectiveness.
Source Basis: Retail Performance Business Requirements PDF & Power BI dashboard screenshot. Values transcribed from screenshot; calculations not independently recomputed from raw source data.
