# DECATHLON

Retail Performance Dashboard — Executive Summary

**Project:** Retail Analysis & Profitability
**Period:** YTD through 15 Sep 2026 (vs PYTD 2025)

**Tools & Tech:** Power BI, DAX, Power Query, Data Modeling

**Focus:** Performance Gaps, Margin Integrity & Category YoY Growth

## 1. BUSINESS PROBLEM

Retail stakeholders need a consolidated view of sales, profitability, order activity, and product performance to understand business trends and identify areas requiring further investigation. Without consistent year-over-year comparisons and reliable category-level reporting, managers may struggle to determine which sports, regions, product types, and brands are contributing to overall performance.

## 2. SOLUTION DELIVERED & KEY ANALYSIS

Developed an interactive Power BI dashboard to monitor six key performance indicators (KPIs), compare current-year results with the equivalent prior-year period, and explore sales performance across sports, product types, regions, and brands via interactive slicers (State, Sport, Colour, Payment Method, Promotion).

| NET SALES | GROSS PROFIT | GROSS MARGIN | UNITS SOLD | TOTAL ORDERS | AVG ORDER VALUE |
|---|---|---|---|---|---|
| ₹55.26M | ₹21.72M | 39.3% | 47.77K | 24.08K | ₹2.29K |
| ▲ +17.5% YoY | ▲ +18.4% YoY | ▲ +0.3 pp | ▲ +16.5% YoY | ▲ +16.3% YoY | ▲ +1.1% YoY |

## 3. ROOT-CAUSE ASSESSMENT

The dashboard highlights areas for investigation, but it does not establish a confirmed commercial root cause.

- **Category Sum Check:** Visible sales-by-sport bars may sum to more than the Net Sales YTD KPI. Possible explanations include inconsistent date filters, calculation scopes, or model relationship issues.
- **Model Validation:** The Promotion slicer state, prior-year calculations, and brand growth benchmark require validation before drawing definitive commercial conclusions.

## 4. THREE RECOMMENDATIONS

- **Validate KPI Accuracy & Consistency:** Reconcile sales by sport and region with the headline sales KPI. Verify date ranges, profit/margin logic, distinct order counts, units-sold definitions, and default slicers.
- **Investigate Sales & Profitability Drivers:** After validating calculations, examine slower-growing brands, sports, regions, and product types. Compare trends against gross margin, volume, and promo segments.
- **Establish Monthly Performance Reviews:** Use the dashboard in regular reviews with stakeholders. Assign action owners/deadlines, track progress, and integrate targets or inventory data when available.

## 5. BUSINESS CONCLUSION

The dashboard provides a consolidated view of retail performance and enables interactive analysis of sales, profitability, and category-level trends. Its immediate value is improved visibility into business performance. The next priority is to validate KPI consistency and then use the verified findings to guide focused, evidence-based business investigations.

**Data Note:** These are values displayed in the portfolio dashboard, not verified Decathlon company financial results. They should be validated against the underlying dataset before drawing final conclusions.
